Here we have a rather nice AV installation (or home cinema to you and me) The job was designed from scratch to house very high quality equipment. A great deal of time and effort both for ourselves and our customer went into this project. We are all really proud of the result.

we would be delighted to show you drawings and detailed photos.

This project involved fitting new high tech desks into an existing library. There was no question of cutting into the beautiful library shelves so we came up with a rather clever system to fit the desks in perfectly. There were 4 bays just like this one and the whole job was installed in less than a day.

There are lots of details you can see if you also have a 'change of use' project to manage.

Not a lot of people know this but we design and manufacture a great range of fixed seating products.

This is a University Library Project which looks really smart.

If you have a project for fixed seating whether a club, pub, reception or whatever, please call us.

Reception Counters, one of our real specialities. We are not like other manufacturers who just want you to choose from a range of modules.

You can have your Reception Counter designed for you alone. In an amazing choice of colours and textures. Carefully designed to cater for the work you carry out at the counter. And all DDA compliant.

This project is in Maple and Steel. The tambour cupboards were also specially built to fit the space.

A small but rather nice reception counter for the student advice department of a University.
You can't see the DDA provision at the front in this photo, but it is there!
The curved front, we think just finishes the counter off nicely.

It doesn't take long to make these smaller units and they work great in shops, restaurants, hairdressers, everywhere!

Lots of drawings and photos to show you. Call us and come visit.

Factory photograph I'm afraid, so not great 'mood' lighting. However you can still see how smart the laminate is on this job.

It is always great to see an essentially inexpensive job looking like a million dollars through the choice of colours and textures.

A good reason for having your special pieces of furniture designed and built by us.
